EXPERIENCE

Technology Workplace Services (Internship)

EQ Bank

September 2026 – Ongoing

Toronto, ON

- Collaborated with cross-functional teams via Jira to support enterprise infrastructure and streamline workflows
- Resolved software issues and optimized support efficiency utilizing debugging and automated internal tools
- Maintained internal workplace systems to ensure high availability and reliable daily operations
- Tracked technical requests through ServiceNow and gathered stakeholder feedback to drive continuous improvement

Full-Stack Mobile App Developer (Internship)

UNUHR

March 2026 – May 2026

Toronto, ON

- Architected a full-stack mobile application job board for healthcare professionals using React Native and Expo
- Optimized UI design improving screen rendering performance, achieving a 20% reduction in memory consumption
- Engineered a Node.js/Express REST API with Supabase for secure authentication and database operations
- Collaborated with a software development team using Slack, Git, and GitHub Actions utilizing a CI/CD Pipeline

PROJECTS

BatteriVolt | React, Spring, AWS, Vercel, MySQL, Maven, Git, Google Gemini

July 2026

- Developed a 3-tier EV e-commerce application using SOA and REST APIs on AWS to support future scalability
- Implemented a secure conversational AI chatbot via Google Gemini API for 24/7 user assistance
- Integrated the Open Charge Map API and built an interactive map calculating distances to available EV chargers
- Configured a Spring backend and AWS hosted database that manages secure user authentication

HarmonAI (Hackathon Winner) | Vue, Node.js, Express, Git, Google Gemini, Multer, Cors

November 2025

- Awarded 2nd place at the York University CSHub Hackathon for developing a full-stack AI vocal coach platform
- Built a responsive frontend using Vue with browser-based voice recording and interactive pitch-matching games
- Created the backend with Node.js and Express to manage secure audio file uploads via Multer
- Leveraged Google Gemini to analyze pitch accuracy and vocal patterns within a scalable monorepo architecture

Professor Parrot | Flutter, Dart, Diacritic, Flutter_tts, GoRouter, Supabase, Git

April 2026

- Designed a gamified, cross-platform French language learning application utilizing Flutter
- Connected a Supabase database to manage secure user authentication and routing guards with GoRouter
- Implemented an SM-2 spaced-repetition algorithm and gamified XP leaderboards for driving user engagement
- Embedded text-to-speech functionality and embedded video players for interactive speaking and listening modules

PUBLICATIONS & RESEARCH

Toward Inclusive Digital Drawing in Education | Excel, Python, Pandas, LaTeX

April 2026

- Co-authored an HCI research paper presented at the ACM UMAP 2026 Conference (UMAP4Good Workshop)
- Conducted a 2400 trial within-subjects study evaluating continuous motor control across 4 input devices
- Processed dataset trials via Python and Pandas to calculate user accuracy, speed, and consistency
- Formulated software guidelines for device-aware educational interfaces to support UN SDG 4

EDUCATION

York University

Honors, Bachelor of Science in Computer Science

Toronto, ON

Expected May 2027

TECHNICAL SKILLS

Languages: Java, Python, SQL(MySQL), JavaScript, TypeScript, HTML/CSS, Dart, C#, LaTeX

Frameworks: React, Vue, React Native, Expo, Flutter, Node.js, Express, Next.js, Spring, Tailwind CSS

Developer Tools: Git, Github, AWS, Vercel, Antigravity, Claude Code, Google Gemini, VS Code, Docker, Supabase

Libraries: pandas, NetworkX, Snap.py, NumPy, Matplotlib, Multer, Cors, shadcn/ui, React Router, TanStack Router
